

## About the ListenWIFI Pilot Program

**Last Updated:** January 8, 2025

The Church's Meetinghouse Facilities Department (MFD) is piloting a new Wi-Fi based interpretation/assistive listening system called "ListenWIFI" in 125 meetinghouses in North America. These pilot meetinghouses were selected based on a variety of objective demographic criteria.

All other meetinghouses should continue to use the standard radio frequency (RF) equipment until the pilot results are understood and decisions are made about whether ListenWIFI should be installed in additional meetinghouses, or whether a completely different solution should be explored. There are significant costs associated with installations of ListenWIFI, including specialized equipment and the need to upgrade the meetinghouse's network. A decision is not expected until late 2025.

If your stake is among the 99% of meetinghouses in North America not participating in this pilot, please be patient until your local facilities manager has more information to share with you.
